EPICS AND USER STORIES

The screenshot shows the Jira interface for an Epic. The left sidebar lists five epics: 'No epic', 'Epic 1: Order Customisation & Pricing', 'Epic 2: Order Management & Flexibility' (selected), 'Epic 3: Inventory & Availability Control', and 'Epic 4: Staff & Reporting Features'. The main area displays 'SCRUM Sprint 1' with a 'Plan your sprint' instruction. Below the sprint, the 'Backlog' section shows two items: 'SCRUM-2 1.1 - View Drink Price' and 'SCRUM-5 1.2 - Customize Drink Options'. Both items are linked to 'EPIC 1: ORD...' and have a 'TO DO' status. The interface includes a search bar, filters, and a 'Quickstart' button.

Item	Link	Status	Estimate
SCRUM-2 1.1 - View Drink Price	EPIC 1: ORD...	TO DO	2
SCRUM-5 1.2 - Customize Drink Options	EPIC 1: ORD...	TO DO	5

This screenshot shows the Jira interface for the same Epic, but with different backlog items. The left sidebar is identical. The main area displays 'SCRUM Sprint 1' with a 'Plan your sprint' instruction. Below the sprint, the 'Backlog' section shows two items: 'SCRUM-4 2.1 - Cancel Order Anytime' and 'SCRUM-6 2.2 - Order Summary Review'. Both items are linked to 'EPIC 2: ORD...' and have a 'TO DO' status. The interface includes a search bar, filters, and a 'Quickstart' button.

Item	Link	Status	Estimate
SCRUM-4 2.1 - Cancel Order Anytime	EPIC 2: ORD...	TO DO	3
SCRUM-6 2.2 - Order Summary Review	EPIC 2: ORD...	TO DO	2

ALL BACKLOGS:

Epic 1: Order Customization & Pricing

Description: Allow customers to easily customize their drinks (type, size, add-ons) while seeing transparent pricing.

User Story 1.1 – View Drink Price

- *As a customer, I want to see the total price of my drink after selecting size and add-ons, so that I know the cost before confirming my order.*

User Story 1.2 – Customize Drink Options

- *As a customer, I want to choose from different sizes and add-ons, so that I can personalize my drink to my liking.*

Epic 2: Order Management & Flexibility

Description: Give customers full control of their orders before payment to reduce mistakes.

User Story 2.1 – Cancel Order Anytime

- *As a customer, I want to cancel my order before payment, so that I can avoid paying for something I no longer want.*

User Story 2.2 – Order Summary Review

- *As a customer, I want to see a clear summary of my selected coffee, size, add-ons, and price, so that I can confirm it is correct before paying.*
-

Epic 3: Inventory & Availability Control

Description: Ensure the kiosk updates stock accurately and informs customers about unavailable options.

User Story 3.1 – Ingredient Deduction After Order

- *As the system, I need to deduct the used ingredient quantities after an order, so that stock levels remain accurate.*

User Story 3.2 – Notify Out-of-Stock Items

- *As a customer, I want to be immediately notified if a drink size or add-on is unavailable, so that I can adjust my order without delays.*
-

Epic 4: Staff & Reporting Features

Description: Provide café staff with tools to track sales and improve management.

User Story 4.1 – Daily Sales Report Access

- *As a staff member, I want to view daily sales reports by drink type and total revenue, so that I can track performance.*

User Story 4.2 – Staff Login for Admin Mode

- *As a staff member, I want to log into the kiosk with admin access, so that I can securely view reports and system data.*
-

Epic 5: System Performance & Reliability

Description: Ensure the kiosk is fast, responsive, and highly available during café hours.

User Story 5.1 – Fast Response Time

- *As a customer, I want the screen to update within 1 second of my selections, so that my ordering experience feels smooth.*

User Story 5.2 – High Uptime Guarantee

- *As the café manager, I want the kiosk to be available at least 99% of working hours, so that customers can always place orders.*

Reflection qns:

1) Did your estimations reflect the actual effort?

The estimations were fairly close to the actual effort in some cases, but not perfectly accurate. Simpler stories like “*View Drink Price*” and “*Cancel Order*” matched the expected effort, while more complex stories like “*Ingredient Deduction After Order*” and “*High Uptime Guarantee*” turned out to have more hidden complexity. This shows that while Fibonacci story points helped capture uncertainty, some technical tasks needed finer breakdowns for accuracy.

2) Was your backlog well prioritised?

Yes, the backlog was prioritised with customer-facing features (ordering, pricing, cancellations) marked as *Highest/High*, and internal/admin tasks placed as *Medium*. This ensured that the MVP could be delivered early. However, performance and reliability stories were pushed later, which may introduce risks if left too late in development.

3) How did your sprint align with your plan?

The simulated sprint aligned closely with the plan. User stories moved smoothly from To Do → In Progress → Done without major issues. The sprint goals for each Epic were achievable, and all planned stories were completed within the sprint duration. This showed that the estimation and prioritization were effective.

4) What insights did the burndown chart give you about your team's capacity?

The burndown chart gave a **single-step type output** (flat line for most of the sprint, followed by a steep drop at the end). This suggested that the team is capable of completing the planned workload, but their work pattern is uneven — they tend to finish tasks in bulk rather than incrementally. It highlights a need for better pacing, earlier testing, and breaking stories into smaller tasks to achieve a smoother workflow and more predictable progress.
